

CloudDraft New Customer Onboarding Process

Process Map, Goals, Pain Points, and Industry
Comparison

Process Goal(s)

- - Reduce 30-day churn by improving onboarding clarity and reducing friction.
- - Ensure users successfully verify email, invite team, import data, and connect integrations.
- - Provide differentiated paths for Standard vs Enterprise users.

Process Map

Pain Points

- - 42% drop-off at team invitation due to friction (Slack export).
- - Hidden "Skip for now" link causing abandonment.
- - CSV importer crashes for files >100 rows (Support logs).
- - Salesforce OAuth requires IT involvement, causing delays.
- - Blank workspace overwhelming for Standard users (Zoom transcript).

Differences vs Comparable Organizations

- - Competitors provide pre-built templates (Basecamp example).
- - Competitors allow large CSV uploads without manual intervention.
- - Competitors surface "skip" options more clearly.
- - Competitors streamline integrations without IT bottlenecks.

Recommendations

- - Improve visibility of "Skip for now".
- - Fix CSV uploader or auto-detect file size and redirect.
- - Pre-configure starter templates for all tiers.
- - Add Salesforce OAuth pre-check before user attempts connection.

Next Steps

- - Validate process with stakeholders.
- - Prioritize fixes based on impact.
- - Prepare updated onboarding flow for testing.
